Hello James.

Thanks for chatting with me earlier. As I mentioned, EPA and TCEQ are looking into options for private well owners in the impacted counties to bring water samples in for analysis. We are looking for analysis of coliforms, routine analysis (conductivity, pH, nitrate, TDS, etc) and metals. Specifically we are asking if your agency can help support this effort and if so, can you provide us with answers to the following questions so we can possibly partner with you....

Can we use regional offices for collection locations?
Can you provide staff for sample location collections?
Can the TDSHS laboratories analyze for total coliform?
How many laboratory locations would be available for such analysis?
How many samples can you analyze and over what period?
Cost of analysis?
Data turnaround timeframe?

Thank you again for talking with me and for any support you can provide. Please do not hesitate to email or call me with any questions.
